#### **DETAILED ACTION**

1. Claims 15-29 are presented for examination.

## Claim Rejections - 35 USC § 102

- 2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
  - A person shall be entitled to a patent unless –

    (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 15 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitehouse et al. [US 5,872,934].

As to claim 15, Whitehouse et al teach a method for automatically allocating addresses among control devices connected to a data bus system [fig. 1], in which the control devices interchange data, using respective transmission/reception units [e.g., bidirectional drivers 210<sub>1</sub>, 210<sub>2</sub>, ..., 210<sub>N</sub> in fig. 1] via a common data bus line [RS-485 serial data bus], and simultaneously access data sent using the common data bus line, said method comprising:

starting an address allocation period by transmitting [col. 4, lines 23-27] a message on the common data bus line to a plurality of control devices that are to be addressed;

in response to the message, during the address allocation period, electronically breaking [col. 4, lines 28-33] the common data bus line into individual subsections, by each of the control devices which are to be addressed using a respective isolating means [e.g., DPDT relay] for electronically breaking the common data bus line; and

Application/Control Number: 10/539,606

Art Unit: 2182

each of the control devices which are to be addressed placing its respective transmission/reception unit at a transmission potential [inherently 'high' by the termination network  $Z_T$  to render the bus operable in RS-485 bus].

4. As to claim 29, Whitehouse et al teach a method for assignment of addresses to a plurality of control units that are connected by a common data bus line [RS-485 serial data bus], said method comprising:

one of said control units, acting as a master unit [SCU 100 in fig. 1], transmitting a message [col. 4, lines 23-27] to remaining control units, acting as a slave unit [SVDU 200<sub>1</sub>, 200<sub>2</sub>, ..., 200<sub>N</sub> in fig. 1], via said data bus line, thereby initiating an address allocation period;

in response to the message, during the address allocation period, each of said slave units opening [col. 4, lines 28-33] a switch to break said data bus line within said slave unit, and causing a dominant signal [inherently 'high' by the termination network  $Z_T$  to render the bus operable in RS-485 bus] to be present at its input, which is connected to an output of a preceding slave unit;

each slave unit detecting [receiving mode inherently 'high' and waiting for "status request" from the SCU in col. 4, lines 34-41] whether a dominant signal is present at its output; and

only a slave unit which does not detect a dominant signal at its output accepting [col. 4, lines 42-49] an address transmitted from the master unit at a preset time [inherent to steps 114, 116, 200 in fig. 2]

### Allowable Subject Matter

- 5. Claims 26-28 are allowed.
- 6. Claims 16-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ilwoo Park whose telephone number is (571) 272-4155. The examiner can normally be reached on Monday through Friday from 9:00 AM to 5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571) 272-4147. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
